

# 2-Methyl-1-pyrrolidine

## A versatile synthetic building block

### APPLICATIONS

2-Methyl-1-pyrrolidine is a versatile synthetic scaffold, thanks to the variety of reactivity options provided by its structure.

2-Methyl-1-pyrrolidine can vary from being a starting material of key imidazole functionalities and indole cores to a precursor of the common histamine H<sub>3</sub> receptor chiral pharmacophore. It has been widely used to access structurally decisive moieties found in a wide range of biologically and pharmaceutically relevant compounds.

### BENEFITS

VIO Chemicals offers 2-Methyl-1-pyrrolidine using an advantageous, competitive and readily scalable in-house process. Final specifications can be customized according to the intended use of this versatile precursor, in order to best fit the specific requirements of the chemical transformation leading to your product.

### TECHNICAL PROFILE

- CAS No: 872-32-2
- Empirical formula: C<sub>5</sub>H<sub>9</sub>N
- Molecular weight: 83.13

### SPECIFICATIONS

- Appearance: Colourless to brown liquid
- IR: Conforms to structure
- H-1, C-13 NMR: Conform to structure
- Purity (GC): >98%
- Water content: <0.25%

Products which are subject to patent protection are currently not offered or made available in countries where patents are in force. orders or deliveries are possible prior to the expiry date of valid patents.
